

ABSTRACT

Improved ear tag formed by two parts, a tap part (1) and a socket part (2), wherein a capsule for medicinal substances and a piston (4) are incorporated and the stem of the tap part (6) passes through the ear of the animal (5). Catadioptric elements (7) a reading and writing chip and anti-falsification elements are placed on both parts and with the elements so that the pincer or tong parts permit placing the crottle (8 and 9).
